Paragraph Variable Width

abc

OpenPGP end-to-end encryption is possible.

Encrypt

Account Settings

End-to-End Encryption

Without end-to-end encryption the contents of messages are easily exposed to your email provider and to mass surveillance. To send encrypted or digitally signed messages, you need to configure an encryption technology, either OpenPGP or S/MIME. Select your personal key to enable the use of OpenPGP, or your personal certificate to enable the use of S/MIME. For a personal key or certificate you own the corresponding secret key.
